

Architetture Evolutive in Azure

Progettare sistemi che sanno cambiare

- Mancanza di pratiche ingegneristiche consolidate.
- Cambio dei requisiti durante lo sviluppo.
- Complessità crescente che superava la gestione umana.

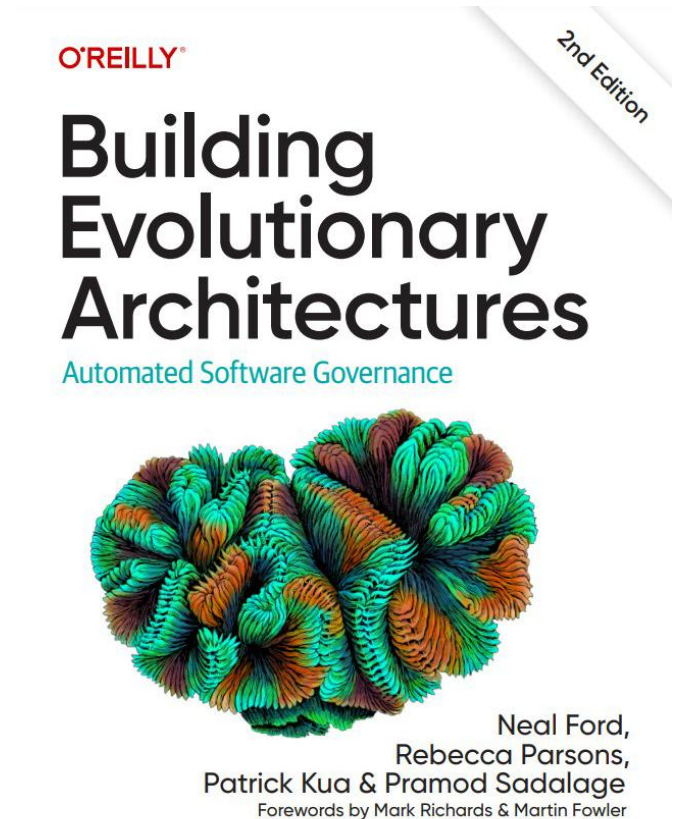

Si è iniziato a parlare di gestione del ciclo di vita del software, organizzazione, teorie, tecniche, strumenti e metodologie adeguate.

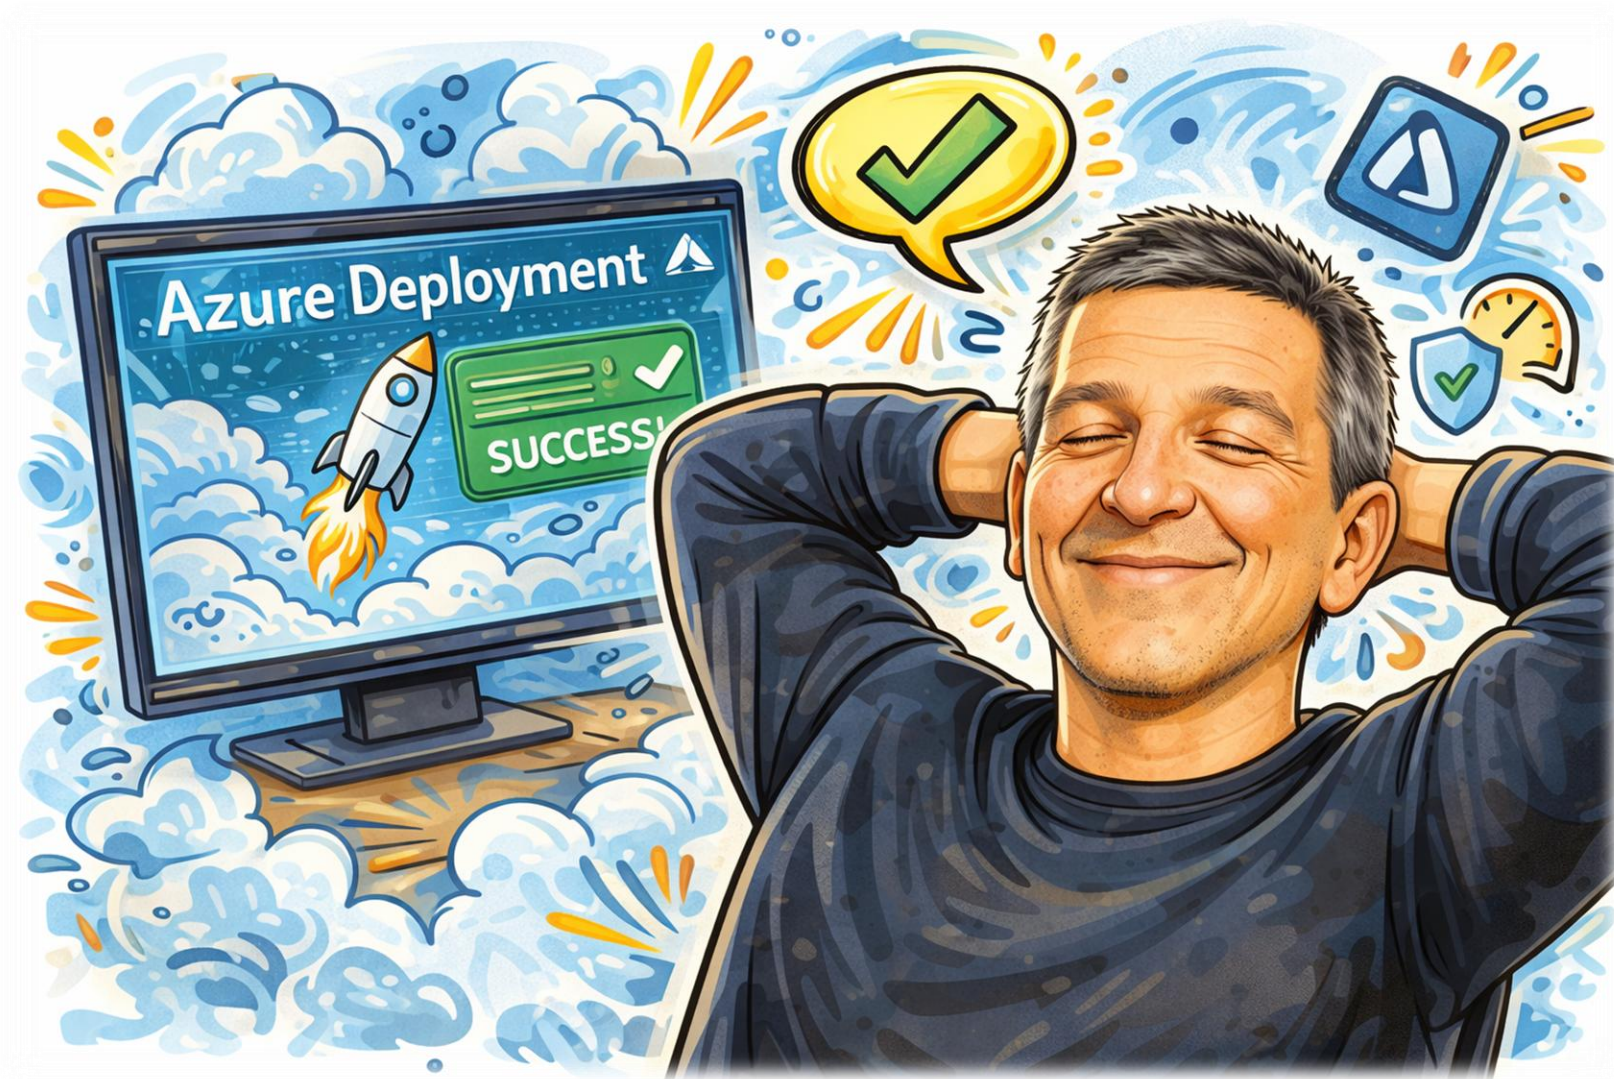

(Ingegneria del Software)

Le architetture evolvono

*Building systems that **age** gracefully and effectively is one of the enduring challenges of software development generally and software architecture specifically.*

***Bit rot**: ... is either a slow deterioration of software quality **over time** or its diminishing responsiveness that will eventually lead to software becoming faulty.*

Container App

SQL Server 2025 on
Windows Server 2025

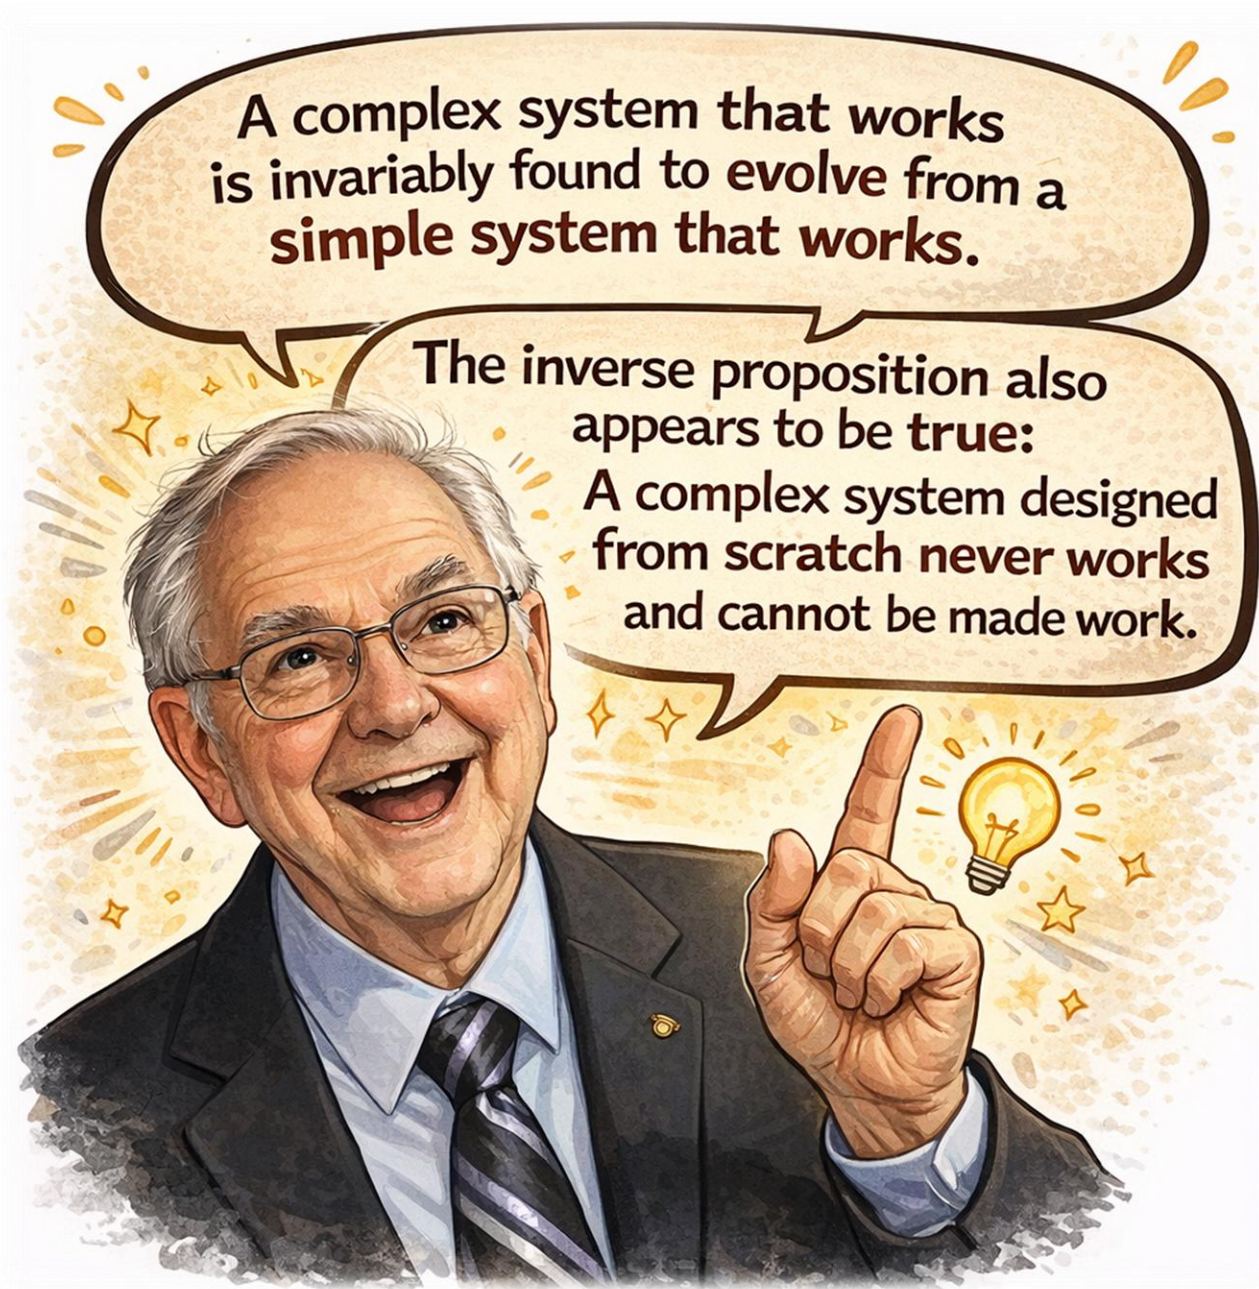

Event Hubs

Azure non basta!

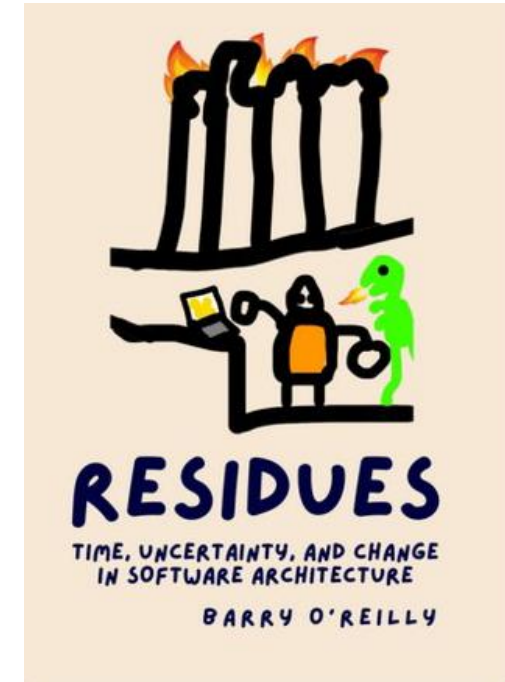

Dipendenza dal business

Every architecture involves a software application which must live its life and execute inside a business environment.

*This **constant change** affects the architecture.*

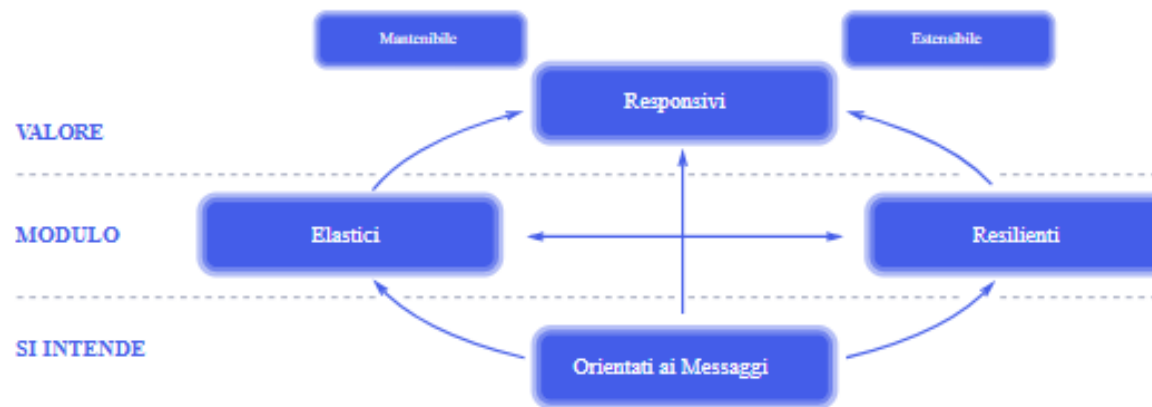

**Nel Actor model, un actor
riceve messaggi, prende decisioni,
crea nuovi actor e nuovi messaggi,
ma può interagire solo tramite
messaggi.**

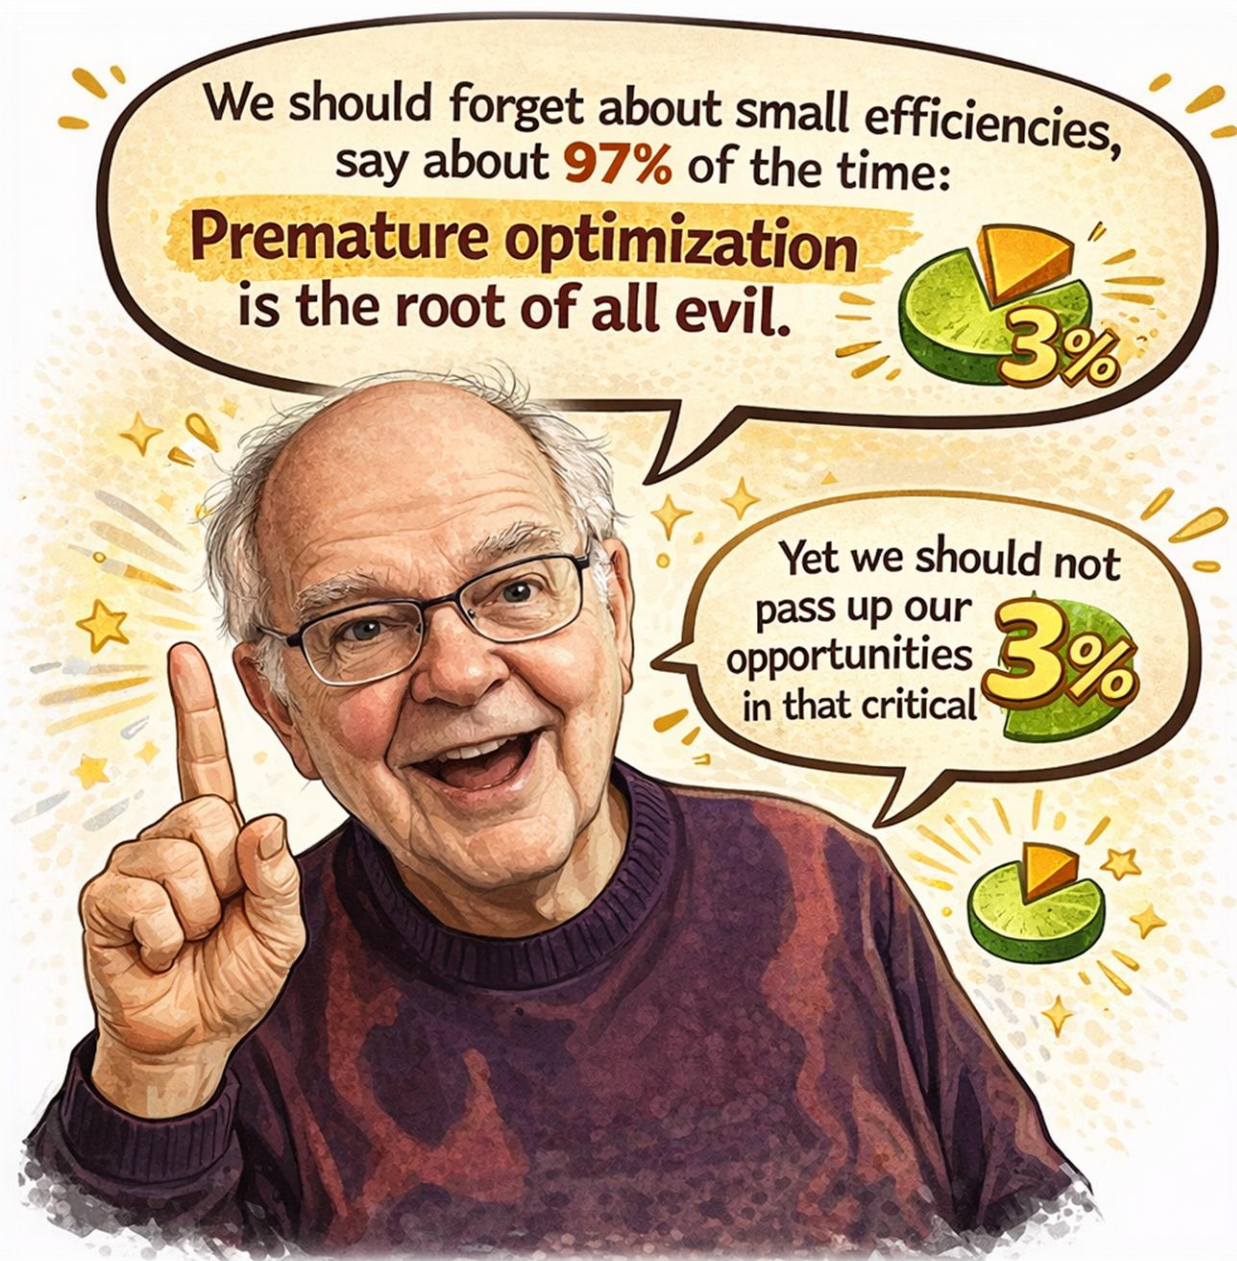

***Non serve la
sincronizzazione!***

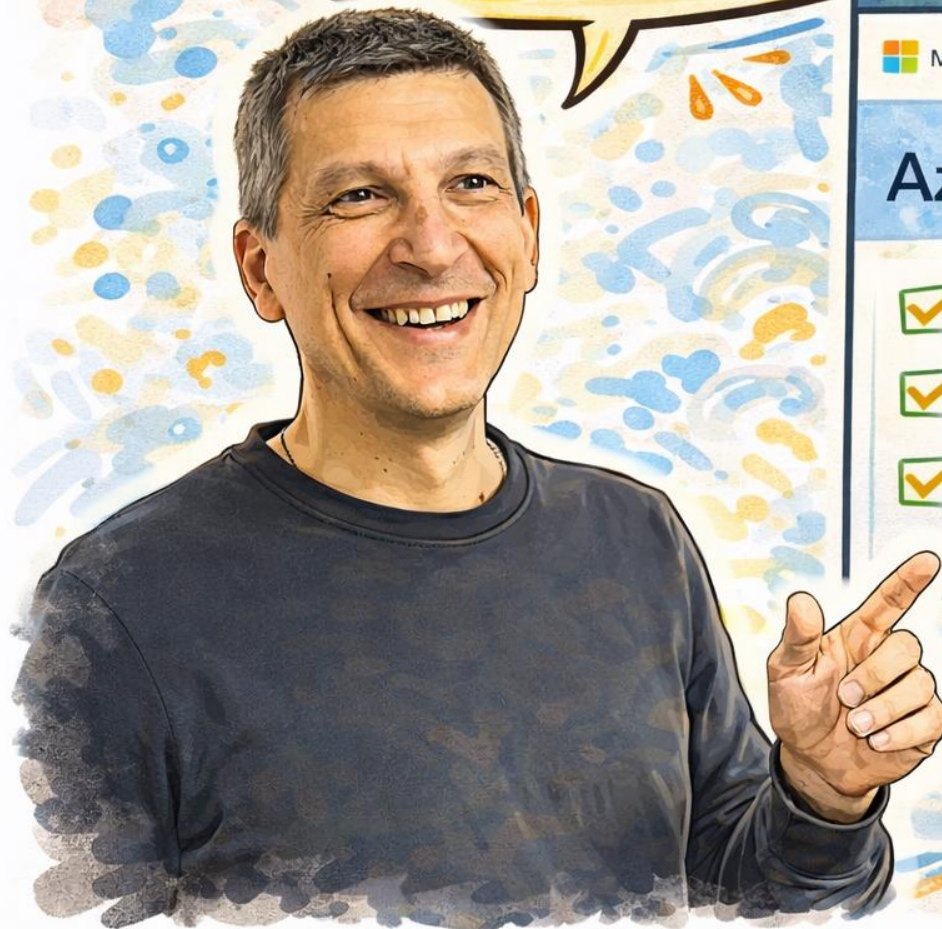

Il Manifesto dei Sistemi Reattivi

**Prendiamo ispirazione
dalle guide ufficiali**

A screenshot of a web browser window showing the Microsoft Learn Azure architecture page. The page has a blue header with the Microsoft Learn logo and the word 'Azure'. Below the header, the title 'Azure architecture' is displayed. A list of three items with green checkmarks is shown: 'Fallacy of Distributed Systems', 'Event-driven', and 'Decoupled'. Below the list, the text 'Non serve la sincronizzazione' is visible. At the bottom of the screenshot, there is a blue button with the text 'Read the guide'.
